TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Frameworks: Next.js, React, Flask, Pandas

Technologies: OpenAI API, Supabase, PostgreSQL, Node.js, Docker, AWS, Git, Cypress, Entra, REST APIs

EXPERIENCE

Independent Software Engineer

May 2026 - Present

- Built an AI charting assistant in daily use by a licensed dermatology provider, converting clinical shorthand to structured notes and saving ~5 min/chart.
- Built the full stack (Next.js, Flask, Supabase) with JWT auth, row-level data isolation, and HIPAA-aware safeguards: client-side PHI detection across 9 categories and a 13-pattern prompt-injection filter.

Eikon Therapeutics

Software Engineer II

Mar 2025 - Jul 2025

- Designed, developed, and released an internal content creation application with interactive preview capabilities, reducing GIF creation time by 70 percent and supporting 120 monthly assets.
- Designed, implemented, and maintained a 24/7 monitoring dashboard that achieved 99.95 percent uptime and reduced mean time to resolution by 40 percent.
- Optimized Docker based deployment workflows that reduced deploy time by 20 percent and lowered rollback rate by 50 percent.
- Built full stack features for a machine learning labeling tool, adding 6 REST API endpoints supporting annotation of approximately 2,000 images per day and increasing throughput by 60 percent.

Software Engineer I

Nov 2022 - Mar 2025

- Implemented HTTPS and Single Sign-On (SSO) using Entra and MSAL for internal applications, managing certificate configuration across development, alpha, and production environments.
- Improved a real time experimental data monitor through caching and API optimization, reducing API traffic by 50 percent and load times from 8 to 3 seconds.
- Built and maintained Cypress end to end tests for all team owned internal APIs. Coverage grew from 0 to about 70 percent and QA found regressions fell by about 35 percent.
- Designed and implemented reusable React UI components including configurable tables, saved views, and search interfaces, reducing time to locate key datasets from approximately 45 seconds to 10 seconds.

Kingston Technology

Programming Analyst

Jul 2021 - Oct 2022

- Led the full lifecycle development of an internal web application that tracked and expedited malfunction escalations, contributing to process improvements within the company.
- Replatformed 3 Lotus Notes apps to a single web stack, lowering maintenance effort by about 20 percent and removing the need for Notes licenses for the team.

EDUCATION

University of California, Irvine | B.S. in Computer Science
